

IMPORTANT

1. DO NOT FORGET TO RECORD YOUR SCREEN
2. USE OF AI TOOLS OR ANY OTHER AIDS NOT ALLOWED

Grade 3:

Use the entry ticket as the base and make the following changes:

- Add a new menu option called **Reset shopping list**. The user shall be able to pick the new option using the letter **R** when selecting a menu option.
- The new menu option shall clear all items already added to the shopping list and allow the user to start afresh.
- To make sure the user does not clear the shopping list by mistake the user shall be required to confirm the action by answering a validation question before the shopping list is cleared.
- The validation question shall be asked when the user selects the new menu option and shall have the format seen below. The shopping list shall only be cleared if the user selects **y**.

Are you sure (y/n)?

NOTE: After doing a reset of the shopping list the user shall be able to continue using the script as if it was just started, adding new items, view added items and so on.

Grade 4:

After passing all the automated tests for grade 3, continue by adding the following functionality:

- Add functionality to keep track of how many times the shopping list has been reset.
- When finalizing the shopping list a new message shall be displayed after the shopping list, on the very last line of the output. The message shall look slightly different depending on if the user reset the shopping list or not. See the following two examples for more details:

User did not reset the shopping list: <<Shopping list was never reset>>

User did reset the shopping list: <<Shopping list was reset 3 time(s)>>

NOTE: There is a single space both before and after the message (separating the << and >> from the text), and the count is of course dependent on how many times the user actually reset the shopping list.

Grade 5:

After passing all the automated tests for Grade 4, continue by adding the following functionality:

- Add a new menu option called **Reset from Template**. The user shall be able to pick the new option using the letter **T** when selecting a menu option.
- When selecting the new option the user shall be presented with a sub-menu looking like this:

- 1) Sweets template
- 2) Fruit template

- The script shall continue to ask the user for an option until they selects 1 or 2. Each time they pick something else the following error message shall be shown:

Invalid option, pick 1 or 2

- When the user selects a valid option (1 or 2) the reset counter from Grade 4 shall be increased, and the current shopping list be replaced by one of the following:

Option 1 - Sweets template	Option 2 – Fruit template
Dumle Japp Bilar	Apple Pear Banana

- After the shopping list is replaced the user shall be returned to the menu.

NOTE: Just as for Grade 3 the user shall be able to continue using the script after using the reset option. Also note that no validation question shall be asked when resetting the shopping list using the **Reset from Template** option.
